Abstract: Owners and operators of petroleum refinery wastewater systems are required to keep records of design and operating specifications of all equipment installed to comply with the standards such as water seals, roof seals, control devices, and other equipment. This information

is necessary to ensure that equipment design and operation specifications are met, and the source is in compliance with NSPS Subpart QQQ.

Form Numbers: None.

Respondents/affected entities: Petroleum refinery wastewater systems.

Respondent's obligation to respond: Mandatory (40 CFR Part 60, Subpart QQQ).

Estimated number of respondents: 149 (total).

Frequency of response: Initially, occasionally, and semiannually.

Total estimated burden: 10,200 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$19,400 in either annualized capital/startup or operation & maintenance costs.

Changes in the Estimates: There is an adjustment increase in the overall burden in this ICR when compared to the previous ICR. This is due to a correction from 135 in the previous ICR to 149 in this ICR renewal in the estimated number of petroleum refineries subject to the NSPS. This ICR references the most recently available industry information from the Refinery Sector Rule reconsideration and is consistent with the source count for NSPS Subpart J for petroleum refineries. In addition, this ICR assumes all sources will take time to re-familiarize with the regulation each year.

Director,
