**SUPPLEMENTARY INFORMATION:**

**I. Background**

Section 103(h) of the Federal Mine Safety and Health Act of 1977 (Mine Act), 30 U.S.C. 813(h), authorizes MSHA to collect information necessary to carry out its duty in protecting the safety and health of miners. Further, section 101(a) of the Mine Act, 30 U.S.C. 811, authorizes the Secretary of Labor (Secretary) to develop, promulgate, and revise as may be appropriate, improved mandatory health or safety standards for the protection of life and prevention of injuries in coal or other mines.

MSHA requires mine operators to provide important safety and health protections to underground coal miners who work on and around diesel-powered equipment. The engines powering diesel equipment are potential contributors to fires and explosion hazards in the confined environment of an underground coal mine where combustible coal dust and explosive methane gas are present. Diesel equipment operating in underground coal mines also can pose serious health risks to miners from exposure to diesel exhaust emissions, including diesel particulates, oxides of nitrogen, and carbon monoxide. Diesel exhaust is a lung carcinogen in animals.

Information collection requirements are found in: section 75.1901(a) Diesel fuel requirements; section 75.1911 (j) Fire suppression systems for diesel-powered equipment and fuel transportation units; section 75.1912 (i) Fire suppression systems for permanent underground diesel fuel storage facilities; sections 75.1914(f) (1), (f) (2), (g) (5), (h) (1), and (h) (2) Maintenance of diesel-powered equipment; sections 75.1915(b) (5), (c) (1), and (c) (2) Training and qualification of persons working on diesel-powered equipment.
