**SUPPLEMENTARY INFORMATION:** In 2019, CDC determined that *CDC Recommendations for Hepatitis C Screening Among Adults - United States, 2020* constituted influential scientific information (ISI) that will have a clear and substantial impact on important public policies and private sector decisions. Under the Information Quality Act, P.L. 106-554, agencies are required to conduct peer review of the information by specialists in the field who were not involved in the development of these recommendations. CDC solicited nominations for reviewers from the American Association for the Study of Liver Diseases (AASLD), Infectious Diseases Society of America (IDSA) and the American College of Obstetricians and Gynecologists (ACOG). Six clinicians with expertise in hepatology, gastroenterology, internal medicine, infectious diseases and/or obstetrics and gynecology provided structured peer reviews. Peer reviewers were supportive of the recommendations and raised comments about the benefit of screening pregnant women and inclusion of a prevalence threshold. Feedback obtained during the peer review process was carefully reviewed and considered by CDC. Ultimately no changes to the recommendation statement were made; however, additional references and justification for the

recommendation to screen during every pregnancy and maintaining the prevalence threshold were added to the document. A summary of the peer review comments, CDC's response, and changes made to the document in response to the comments can be found in the Supporting Materials tab of the docket and at <https://www.cdc.gov/hepatitis/policy/isireview/PeerReviewCR.htm>.

In addition, on October 28, 2019, CDC published a notice in the Federal Register (84 FR 57733) announcing the opening of a docket to obtain public comment on the draft recommendations for hepatitis C screening among adults. The comment period closed December 27, 2019. CDC received response from 69 commenters on the draft recommendations document. Public commenters included those from academia, professional organizations, industry, and the public.

Many of the comments from the public were in support of the recommendations. For those comments that proposed changes, the majority related to removing the recommendation to screen for hepatitis C in every pregnancy or removing the prevalence threshold for universal screening. Feedback obtained during both the peer review process and the public

comment period was carefully reviewed and considered by CDC. Ultimately no changes to the recommendation statement were made; however, additional references and justification for the recommendation to screen during every pregnancy and maintaining the prevalence threshold were added to the document. A summary of public comments and CDC's response is found in the Supporting Materials tab of the docket.

Dated: April 23, 2020.

**Sandra Cashman,**

*Executive Secretary,*

*Centers for Disease Control and Prevention.*
