- k. Description of Request: The licensee filed a request for a temporary license variance from the minimum operating elevation requirement at Lake Fordyce, a development of the Drum-Spaulling Hydroelectric Project No. 2310, in order to implement a seepage mitigation project at Fordyce Dam. The normal maximum reservoir elevation is 6,341 feet (PG&E datum). The licensee proposes to lower the reservoir to its minimum required elevation of 6245.4 feet and install a membrane liner on the upstream face of the dam and anchored to bedrock. A cofferdam and flow bypass would be installed to allow dewatering of the work area on the upstream side of Lake Fordyce Dam and provide a “dry” workspace while maintaining the required minimum 5 cubic feet per second flow downstream of the dam. A variance from the minimum operating elevation of Lake Fordyce may be needed periodically depending on inflow to provide buffer to ensure the cofferdam would not be overtopped.
