k. Description of Request: The applicant requests approval to replace the two v turbine runners with two new turbine runners. The new runners would be placed in the same location as the existing turbine runners. The installation of the new units would result in the authorized installed capacity of the project decreasing from 1,500 kilowatts (kW) to 1,396 kW and the maximum hydraulic capacity increasing from 456 cubic feet per second (cfs) to 512 cfs. The applicant states the increased efficiency of the turbine-generator units would result in an increase in annual energy generation. The applicant does not plan any other structural modifications to the powerhouse or any other project structures. In addition, the applicant states all construction activities associated with the proposed amendment would occur within the existing powerhouse and would be isolated from the river. The applicant does not propose any changes to the licensed project operations during or after turbine runner replacement.
