m. Description of Request: The licensee requests a temporary reduction in minimum instream flow below Poe Dam down to 100 cubic feet per second, as measured at compliance point NF-23 (United States Geological Survey gage 11404500), from June 1 until November 15, 2025, to facilitate recoating and replacing the seals of the Poe Bypass radial gate. While work on the radial gate is being performed, minimum instream flows will be released through an existing 36-inch pipe during the variance period, at its maximum release capacity. To offset recreational impacts to whitewater opportunities, the licensee proposes a make-up schedule of November 15 & 16, and November 22, & 23, 2025, of similar boating flows, if the variance is approved. In addition, the licensee also requests to postpone monitoring activities performed under the Poe Tributary Access Monitoring Plan, if 2025 is determined to be a dry or critically dry water year type.
