Abstract:

The 21st Century Cures Act (Cures Act) aimed to advance the exchange of electronic health information by promoting patient access through standardized application programming interfaces (APIs). Digital health companies develop apps and health IT tools that enable human interaction with APIs to exchange electronic health information. Prior studies indicate widespread adoption of standardized APIs for interoperability with electronic health records (EHRs). Ongoing assessment of these technologies is crucial to examining the impacts of the Cures Act's health IT provisions and is critical to informing the Assistant Secretary for Technology Policy/Office of the National Coordinator for Health IT's (ASTP/ONC's) policy efforts. With ASTP/ONC's support, the University of California, San Francisco (UCSF) conducted a 2022 survey of digital health companies assessing implementation of and experiences with healthcare APIs; findings from this survey work are published in the Journal of the American Medical Informatics Association. ASTP/ONC finds it essential to continue efforts to survey digital health companies to assess ASTP/ONC's implementation of statutorily mandated information blocking (42 U.S.C. 300jj-52) and APIs "without special effort" policies (42 U.S.C. 300jj-11) under the Cures Act. Information gathered from this effort will help inform ongoing ASTP/ONC efforts to help nurture an ecosystem of innovation and transparency in health care.

This is a 3-year request for OMB approval.
