1. Description of Request: Georgia Power Company (licensee) requests Commission approval to replace the existing bottom-hinged spillway gates with an Obermeyer gate system, and construct a control building to house the equipment and instrumentation needed to operate the new Obermeyer gates at the Burton Development. The

replacement of the existing spillway gates is necessary for the continued operation of Burton Dam during high flow events and would enable plant operators to better control reservoir elevations. The licensee would perform all proposed work behind a bulkhead; therefore, no drawdown would be required. The proposed spillway upgrades are anticipated to begin in 2026 and are expected to take 18 to 24 months. The ground disturbance activities associated with the new control building construction would be limited to less than one acre, and would not require a National Pollutant Discharge Elimination System permit. The project would continue to operate under the terms of its current license, and applicable Water Quality Certification.
