SUPPLEMENTARY INFORMATION:

Reference: AP768324XX

Purpose and Use:

Brief description of the purpose of the transaction: To finance the redevelopment of gold-antimony-silver-tungsten critical mineral deposits in the Stibnite-Yellow Pine district of central Idaho under EXIM's Make More in America initiative.

This project advances U.S. leadership in critical minerals by expanding domestic resource development for materials that are foundational to defense systems, energy technologies, and advanced manufacturing.

The transaction is expected to enhance supply chain resilience, reduce reliance on foreign sources for strategic minerals – particularly antimony – and support high-quality U.S. jobs.

Brief non-proprietary description of the anticipated use of the items being exported: The financing will be used for domestic purposes and will result in the export of gold doré bars and antimony concentrate to overseas processing facilities. These materials will be refined into gold bullion and processed into antimony metal and derivative products that serve as essential inputs for U.S. industrial and national security applications. Applications for antimony include semiconductors and lead-acid batteries. As domestic antimony processing becomes available, concentrate will be treated domestically.

Description of Items Being Exported: The items being exported will be gold doré and antimony concentrate.
