Abstract of information available

Human remains representing, at least, one individual have been identified. No associated funerary objects are present. The human remains were reportedly exposed by road construction approximately 50 years ago near Bellevue, Iowa and taken by a local Jackson County resident; they were given to a local art teacher who decided to turn them in to the Jackson County Medical Examiner's Office in February 2026. The Iowa Office of the State Medical Examiner (IOSME)

arranged for their documentation by a forensic anthropologist who determined the human remains were of Native American ancestry and not of medicolegal significance. The human remains were then transferred to the OSA BP in March of 2026 by the IOSME. A middle adult female, 25-50 years old, is represented (BP4034). The more specific location of her original burial location is currently unknown. No hazardous substances have been used to treat the human remains.

Cultural affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location and acquisition history of the human remains described in this notice.

The OSA BP is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and any other consulting parties.
